Application/Control Number: 09/825,918

Art Unit: 2837

In the first sentence of the specification, the patent number of the parent application should be provided.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321© may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 22-24 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-23 of U.S. Patent No. 6,291,759. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant claims 22-24 are broader in scope than the patented claims.

Application/Control Number: 09/825,918

Art Unit: 2837

It is always considered obvious to broaden the scope of the patented claims. For example, note that instant claim 22 is limited in scope to an upper coil, a lower coil and a flat non-magnetized ferromagnetic plate between the two coils which is a subcombination of patented claim 1.

Claims 22-24 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-13 of U.S. Patent No. 6,291,758. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant claims 22-24 are broader in scope than the patented claims.

It is always considered obvious to broaden the scope of the patented claims. For example, note that instant claim 22 is limited in scope to an upper coil, a lower coil and a flat non-magnetized ferromagnetic plate between the two coils which is a subcombination of patented claims 1 and 7.

While this application a division of U.S. Patent 6,291, 758, a clear line of demarcation must be maintained between this application Serial No. 09/954,625 which is a continuation (should be division) of U.S. Patent 6,291,759.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Application/Control Number: 09/825,918

Art Unit: 2837

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claim 22 is rejected under 35 U.S.C. 102(a) as being fully met by either of Kinman "520 or "966, respectively.

Each patent discloses an upper coil 30, a lower coil 20 and a single, uniformly flat non-magnetized ferromagnetic plate 41 disposed between the two coils. The plate forms part of metallic shield of magnetically permeable material which inductively and magnetically decouples the two coils from one another. The material is a mild steel and non-magnetized. Note that the pole pieces in the lower coil are metallic non-magnetized material. Claim 22 is fully met.

Claims 22-24 are rejected under 35 U.S.C. 102(e) as being fully met by either of Kinman "999 or Blucher et al.

Each patent discloses an upper coil, a lower coil and a single, uniformly flat non-magnetized ferromagnetic plate 41 disposed between the two coils. Claim 22 is fully met. Regarding claim 23, each patent discloses at least one magnetic pole piece partially within the upper coil and

Art Unit: 2837

partially within the lower coil and extending through a hole in the ferromagnetic plate 41.

Regarding claim 24, at least one magnetic pole piece extends from above the upper coil to the lower coil.

Any inquiry concerning this communication should be directed to Stanley J. Witkowski at telephone number (703) 308-3101.
